

TECHMOVE LOGISTICS

MASTER SERVICE & TRANSPORT AGREEMENT

SERVICE REQUEST AGREEMENT

This legally binding Service Request Agreement is entered into and made effective as of **May 18, 2026**, by and between the following participating corporate entities:

Provider Operating Entity	TechMove Logistics (Pty) Ltd (Registration No: 2024/883712/07)
Contracted Client Party	Ntombi Khoza Logistics & Supply Chains
Contract Tracking ID	TML-2026-CON-0842
Assigned Hub Region	KwaZulu-Natal Logistics Hub

1. Scope of Operational Logistics Services

The Client hereby retains the services of TechMove Logistics to manage, deploy, handle, and clear designated corporate freight allocations across regional transport supply routes. All physical freight movements remain strictly bounded by defined verification policies specified inside the TechMove System architecture application parameters.

2. Dynamic Workflow Verification Guards

The parties explicitly acknowledge that this transaction framework operates under the TechMove System centralized structural workflow validation rules engine:

- **Service Request Rules:** New freight handling service requests cannot transition into operational status profiles if the underlying operational client context registry is marked flagged, archived, or broken.
- **Contract Association Limits:** Active transportation runs must safely map straight back to valid, non-expired baseline service contract items housed inside the SQL Server data store tables.

3. Remittance Terms and Currency Processing

All transport costs, invoice estimates, and operational toll fees calculated inside the application ledger will leverage localized financial figures. Currency data conversions for cross-border runs utilize automated daily API exchange pipeline fetches matching standardized market metrics.

4. Execution and Assent by Authorized Officers

IN WITNESS WHEREOF, the participating representative parties hereto have executed this Logistics Service Agreement under mutual corporate authorization lines.
